PROFESSIONAL SUMMARY

Junior Python Developer focused on API integrations, Discord bots, automation, and asynchronous workflows. Built RiftWatcher, a Python Discord bot using discord.py and Riot API for League of Legends statistics, live game tracking, and automatic notifications. Also has experience with LLM API integration, React/TypeScript frontend development, Git, Docker, Linux, algorithms, and data structures.

TECHNICAL SKILLS

Python: Python 3, discord.py, asynchronous programming, JSON processing, API integrations, bot development

APIs & Web: REST APIs, HTTP/JSON workflows, LLM API integration, JavaScript, TypeScript, React, HTML, CSS

Tools: Git, GitHub, Docker, Linux, GitHub Pages

Computer Science: Algorithms, data structures, OOP, C, C++, C#

Additional: Unity 2D/3D, UI, lighting, multiplayer, Netcode, Steam integration

SELECTED GITHUB PROJECTS

RiftWatcher | Python, discord.py, Riot API, Discord slash commands | [GitHub](#)

Developed a Discord bot that integrates with Riot API and provides League of Legends player and match information. Implemented slash commands for player statistics (/lolstats), live game tracking (/whoingame), and detailed match breakdowns. Built automatic match notification logic and formatted external API responses into clear Discord messages. Implemented a role randomizer game system (/5stars), improving the bot with community-focused interaction features. Practiced asynchronous command handling, event-based bot logic, API error handling, and structured data processing.

LangLearningPlatform | React, TypeScript, LLM API, GitHub Pages | [GitHub](#)

Built a web platform for learning foreign languages with interactive tasks and LLM-based assistance. Integrated ChatGPT/LLM API to provide instant feedback, mistake explanations, and vocabulary support. Implemented client-side navigation, application logic, responsive UI, and light/dark theme support. Gained practical experience with API-driven product logic, user-facing workflows, and GitHub Pages deployment.

EXPERIENCE

Frontend Developer | LangLearningPlatform - Language Learning Startup | *May 2023 - November 2023* | [GitHub Project](#)

Developed frontend features for an AI-assisted language learning platform using React and TypeScript. Connected the interface with LLM API workflows and implemented logic for interactive learning tasks. Created responsive layouts and a theme system, improving usability across devices.

EDUCATION

Novosibirsk State University | Mathematics and Computer Science | 2022 - 2024

[School 21 \(Sberbank\)](#) | C / C++ development | 2023 - 2025

LANGUAGES & ADDITIONAL INFORMATION

Russian - Native; English - B1

Game development experience since 2018 using Unity; hackathons and team projects experience.
